COMPETITIVE PRICING

European Manufacturers have been actively involved in the development and production of high speed coated EDM wires since the first wire EDM machine was commercialized. European made coated wires have been recognized in the industry for perfection, precision and speed. These wires have been sold under brand names for a number of years.

To provide these products on a competitively priced basis, we have established production arrangements with world leading manufacturers to produce and supply selected high speed coated wires under a private label. To further reduce costs, we are importing common diameters on selected spool sizes in bulk quantities for further distribution within and outside the United States.

These wires have been made using patented technologies and processes and meet or exceed the brand named product quality standards. These wires are further supported by our "one on one" personal sales and technical support programs.
