High Feed Tools for Steel Mold Roughing

HFM / HFMC / HFE / HFEC

IDI high feed tool is the best choice when you need to remove your mold stock very quickly. Specially adapted for small axial depth of cut, high feed rate, and large radial step over, IDI HFM/HFE tools provide high efficient roughing process and leave smooth stock for finishing. Thanks to our ultra-fine carbide material, special geometry, and the new multilayer nanocomposite coating solution, we can achieve both high hardness and toughness for hardened steel mold roughing.

Material: Buderus 2344, HRC53
S7000rpm, F4572mm/min
ap0.2mm, ae 55%

Q series

Non-sticky unhardened(<HRC40) steel milling: carbon steel, alloyed steel, cast iron and tool steel. Suitable for slotting, side milling, trochoidal milling, general part machining.

- higher Vc possible
- long tool life
- excellent finish for bottom surface and side walls
- good performance for deep depth HSC milling

P series

Unhardened(<HRC40) stainless steel 304, 316L, 420 milling. Suitable for slotting, side milling, trochoidal milling, general part machining.

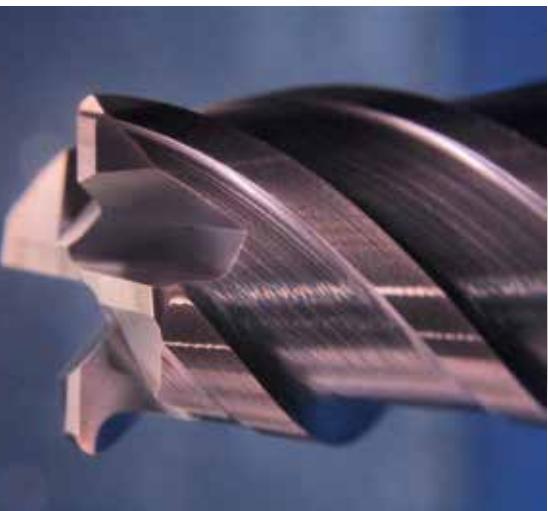

- stable roughing and finishing process
- long tool life
- good surface finish of cut surface

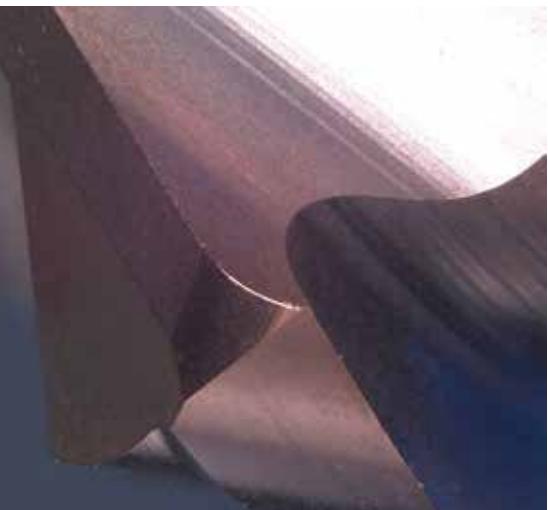

Variable index	Special core section	Ra 0.083 μm, Rz 0.636 μm	High toughness carbide	Variable helix	Stiff core section
Variable helix and micro relief	Edge rounding	High abrasive resistant coating	Ra 0.01 possible	Variable index and large gash	

HPS/HPC hard milling tools

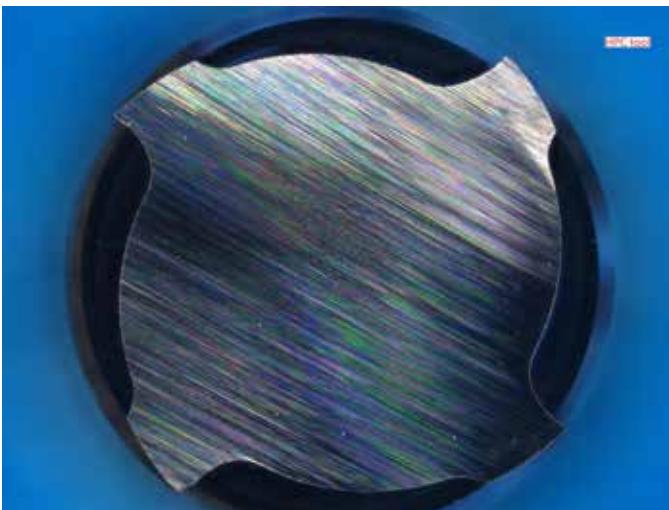

High stiffness flat end and corner radius tools for hardened steel milling.
Suitable for side milling, trochoidal milling, die and mold roughing and finishing.

Polished tool and edge rounded flute edges

Strong and thick gash corner

HPS/HPC thick core

HDB/HDC/HQC for extremely high precision mold finishing

High precision tight tolerance tools for hardened steel milling. Designed for high precision die and mold finishing.

- Specially designed for hardened steel above HRC50, extremely good surface finish
- Full range of ball nose and corner radius tools for high precision finishing . Even D0.2R0.02 is standard.
- High geometry profile and high dimensional tolerance.
- High precision effective length
- Also suitable for P20 HRC38 and stainless 420 finishing. Long tool life and excellent surface finish.

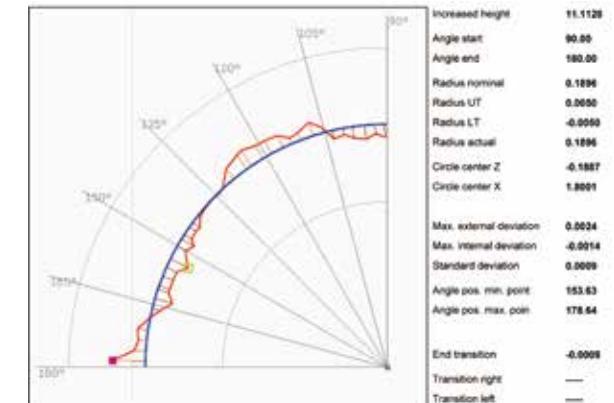

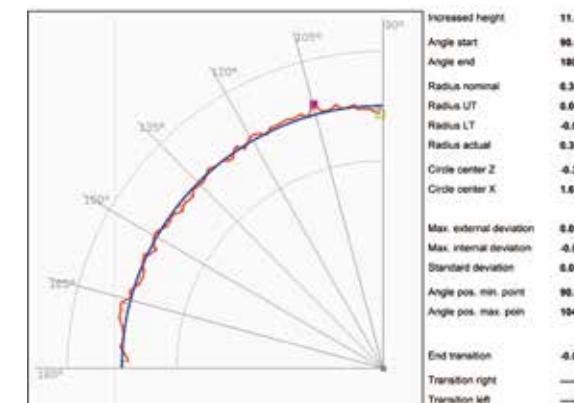

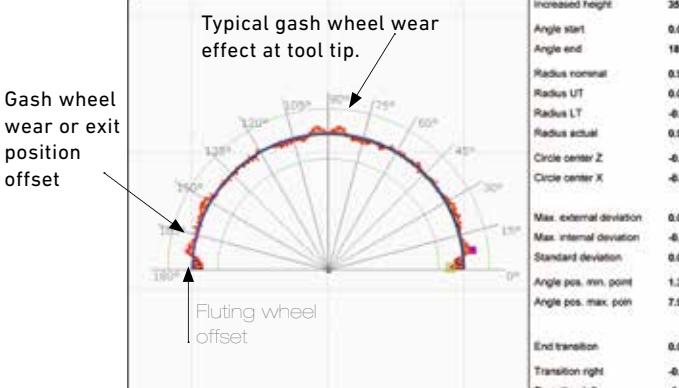

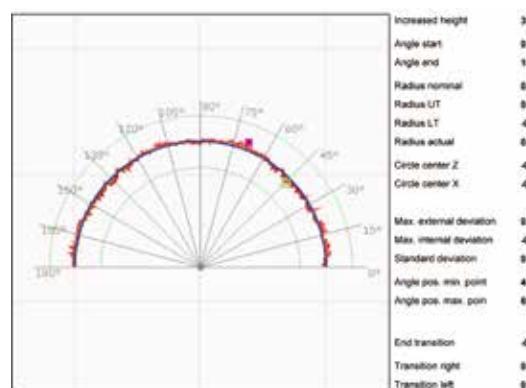

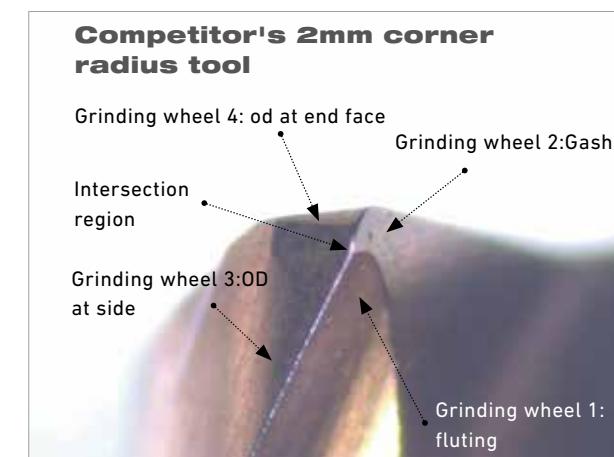

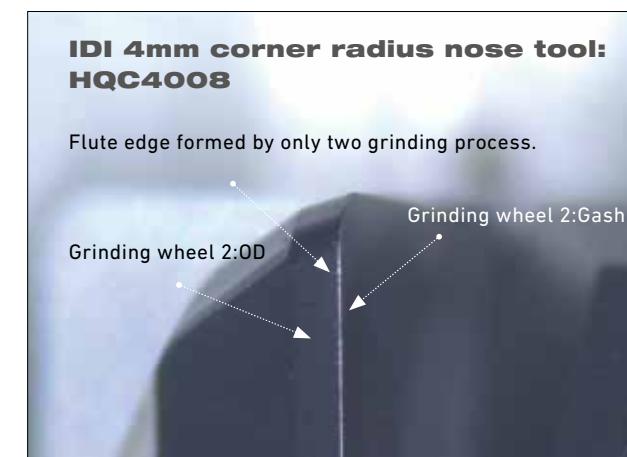

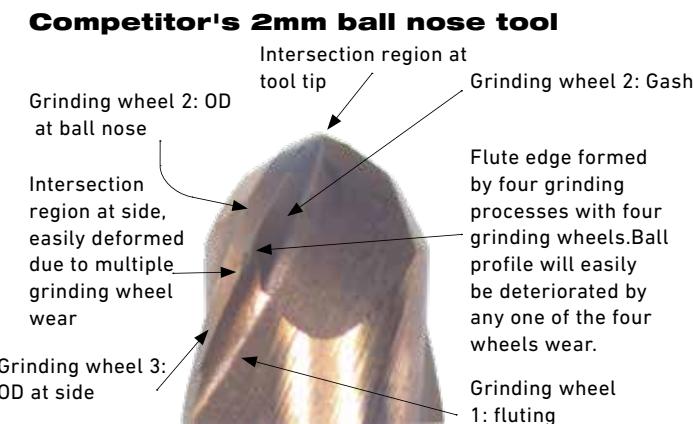

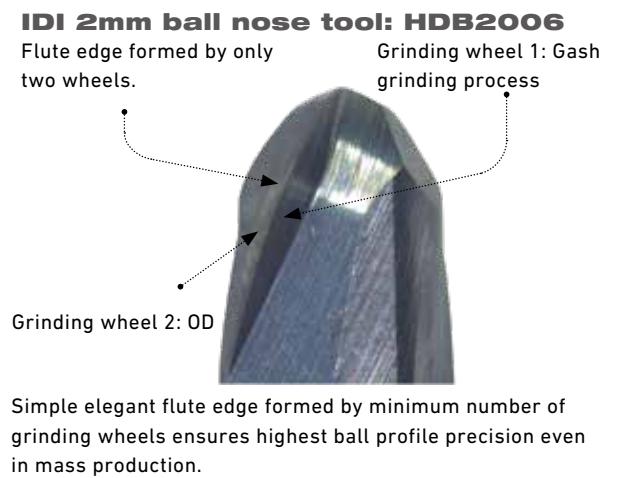

Material: STAVAX HRC52
Size: 30x30x50mm

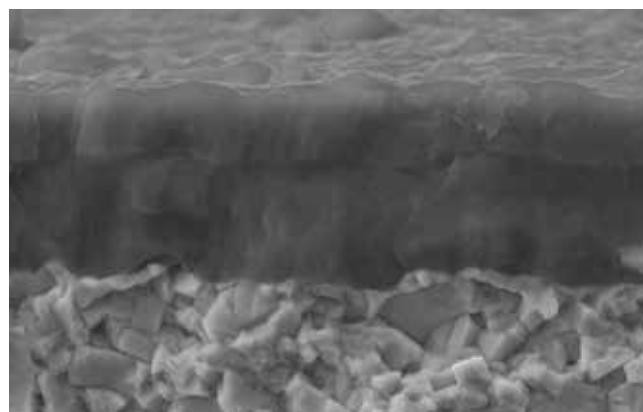

Roughing: S18000, F2000, ae 0.2, ap 0.2
Time: 6:44

Semi roughing: S18000, F2000, ae 0.08, ap0.05
Time: 2:31

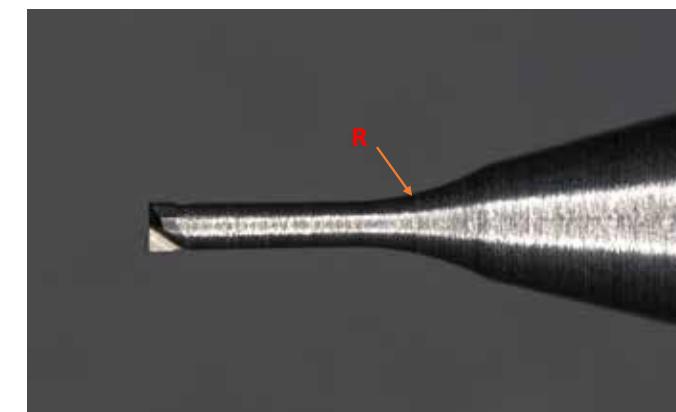

Finishing: S20000, F600, ae=0.02
Time: 24:00

Ultrafine grain size carbide material is used to reach both hardness and toughness

BLA coating solution: good adhesion at high temperature, high wear resistance, good edge stability

Radius geometry at neck end.
Minimize stress concentration.

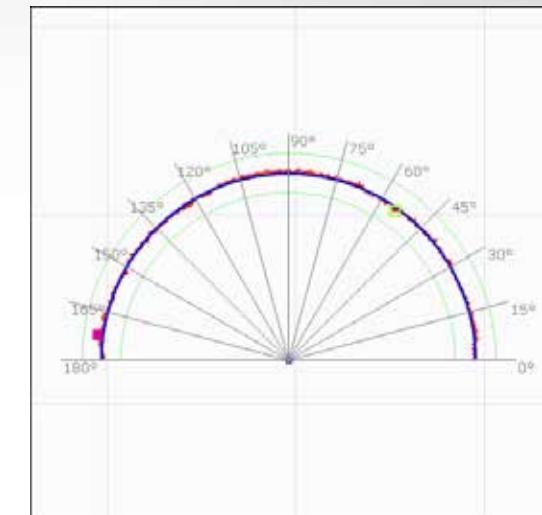

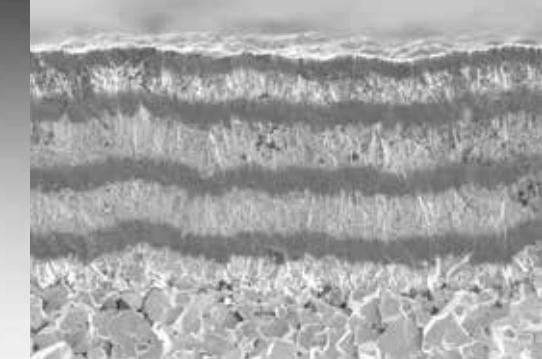

Sharp ball nose tool tip and special geometry angles give excellent surface finish.

Diamond Coated Tools for Graphite Electrodes Milling

Diamond coated tools was IDI's first product line from the beginning of our company. The complexity of manufacturing diamond coated tools provided us very good experience in carbide material, tool grinding, coating and quality control techniques. Over the past 10 years, IDI has continuously improved our diamond tools by trying new materials, grinding methods, coating solutions and even tool cleaning procedures. New quality control instruments and techniques have been implemented to ensure tool quality & performance. Today, IDI is one of the few tool makers in the world that provides a complete product range of diamond tools with top precision and reliability. We provide both metric and imperial unit lines ranging from 0.2- 12mm and 0.010"-1/2" respectively. You can always find what you need for your graphite milling process.

Largest tool series for both metric and Imperial units and also inserts
Special carbide material and diamond coating, long tool life
High precision profile of ball and bull nose tools for accurate 3D shape milling
Highest stability from solid experience and tight QC control
100% QC check before putting in stock

IDI IMPERIAL SYSTEM

QES 2-flute square end tool

Quick mill, square end tool for carbon steel, alloyed steel, cast iron and tool steel. Suitable for slotting, side milling, trochoidal milling, general machining and part machining.

Note: For 1/4" tool above, when cutting steep geometry, use 70% S and F of above condition for finishing.

HFE high feed tools

Small cutting depth, high feed, high ae%, for non-steep geometry and hardened steel mold roughing.

Order example: HQC6015R0.5-50/6S

HQC: hard milling, 4 flute, corner radius

60: cutting diameter 6mm

15: effective length 15mm

R0.5: corner radius R0.5mm

50: overall length 50mm

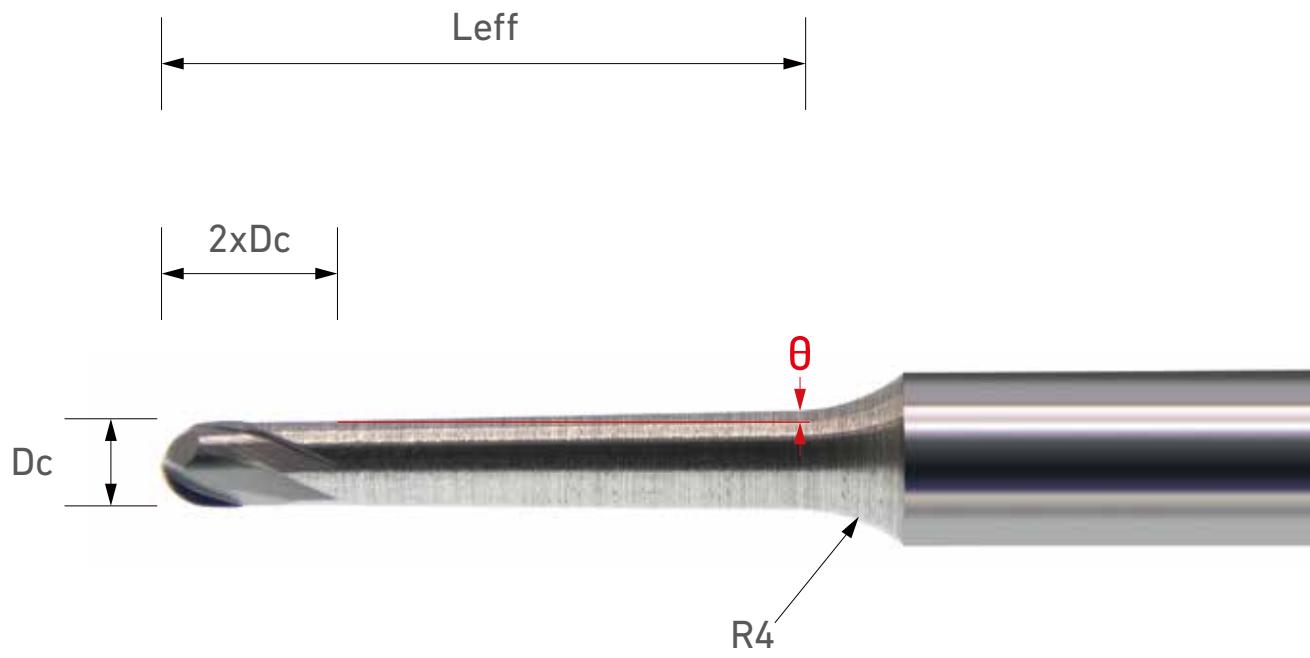

6S: shank diameter 6mm

HDC/HQC cutting condition
